

Day, Date & Time: Saturday, May 17, 2014 at 1020h
Venue: Assembly Hall, Government College,
Hydrabad, Pakistan
Contact Person: **Prof. Mohummed Khalid Rajput**
Telephone: +92 22 923 9541
e-mail: m.khalidrajput@yahoo.com

Chief Guest: **Dr. Mohummed Sohail Rajput**, Secretary to Government of Sindh, Finance Department

Anthromathematics, defined as the mathematics of human body sizes, forms, proportions and structures, was introduced on March 22, 2010 by the speaker during the First Conference on Mathematical Sciences held at University of Karachi. The sciences of *anthropology* (study of human being) and *anthropometry* (measurement of human being) were transformed to *anthromathematics* through ideas from analysis, algebra, topology, number theory and logic. An *anthropometrist* measures heights, but an *anthromathematician* takes measurements and determines accuracy, precision as well as reproducibility of the techniques employed, during session-planning, aligns the scale, ascertains surface-level and checks equipment against agreed-upon standards at the beginning of each session and estimates collected-data consistency at the conclusion of every session. Mathematics plays an important role in developing and improving **sports activities**. In *sport medicine*, *kinesiology* and *sport-performance analysis*, infrastructure, facilities and human resources are available at SF Growth-and-Imaging Laboratory. Project of **gait analysis** is conducted in collaboration with Government College, Hyderabad. Edge-based raster-stereography is being used to generate curvature maps of human back during a gait cycle. Skeletal examination of school athlete, with a focus on detection of trunk deformities, in particular scoliosis, must be mandatory in the age range 9-11 years. In the area of *sport-performance analysis*, undesired sigittal-plane motion during vault performance by gymnast should be monitored using edge-based moiré. The goals of a childhood exercise-program are to increase **fitness level** and reduce obesity through **quantitative recommendations**. Diet-cum-exercise programs in peripubertal students must be integrated with periodic head-to-toe examinations by developmental pediatricians to account for *Puberty-Induced Energy-Channelization (Eenergy-Channelization III)*, in which a temporary drop in height percentile is accompanied by jump in mass percentile, as the student enters puberty (example presented in **Additional File**, page 23). Fig. 1 lists new programs to be offered by Department of Mathematics.

Keywords: Energy-channelization III • Gait • Gymnastic performance • Height • Posture • Weight

MSc Sport Mathematics <i>Anthropolgy & Gymnastics</i>	MSc Anthromathematics <i>Algebraic Topology & Orthopedics</i>
MPhil Anthromathematics <i>Advanced Anthromathematics</i>	PhD Anthromathematics <i>Topics in Anthromathematics</i>

About the speaker: Prof. Dr. Syed Arif Kamal, Head, Anthromathematics Group is serving as Chairman,

Fig. 2. Prof. Kamal is presenting flower boucher to Dr. Rajput

Speaker: **Prof. Dr. Syed Arif Kamal** 
Professor and Chairman, **Department of Mathematics, University of Karachi**, PO Box 8423, Karachi 75270, Sindh, Pakistan (Guest of Honor)
Telephone: +92 21 9926 1300-15 ext. 2293
e-mail: profdrakamal@gmail.com

Department of Mathematics for his second term. He remained Convener of HEC NCRC for Mathematics (2004-2012) as well as Convener, NTS Subject Committee for Mathematics (2009-2012). Since 2012, he is serving on NTS Subject Committee for Physical Education, Health and Sport Sciences. Since 2011, he has been appointed Convener, Sub-Committee (Academics) of the Education Committee, Transparency International Pakistan (TIP). He obtained his BSc (Honors) *summa cum laude*, MSc *summa cum laude* and PhD from University of Karachi, MS from Indiana University, Bloomington, United States and MA from the Johns Hopkins University, Baltimore, United States as Quaid-é-Azam Scholar. His awards and honors include throughout First-Class-First Position and 4 gold medals for scholastic achievements. He led teams in 15 different capacities throughout his 35-year career with progressively increasing responsibilities, which included laboratory setup and team management. He has 151 papers to his credit. His work in the area of Physical Education and Sports Sciences spans over a period of 35 years. During 1979-1982, he was a member of American Alliance for Health, Physical Education, Recreation and Dance (AAHPERD). He worked with health professionals on clinical problems at the James Whitecomb Riley Hospital for Children, Indianapolis, Indiana, United States and Malmö General Hospital, Malmö, Sweden. Since 1998, he is Founding Project Director of **the NGDS Pilot Project** dealing with anthropometry as well as growth and obesity monitoring of the Pakistani children. In 2003, he trained master anthropometrists of TAWANA PAKISTAN. In 2010, he increased ten-fold, the accuracies of height and mass measurements¹. Recently, he completed his study on primary-physical education practices in Pakistan and England, which is submitted for publication. Notable concepts put forward by him in the areas of anthromathematics and sport mathematics are **quantitative estimates of obesity/wasting and stunting/tallness, optimal mass, estimated-adult BMI, pseudo-gain of height or mass, quantitative recommendations for reducing masses** in case of obese children and **energy-channelization problem**, in particular, puberty-induced energy-channelization (this seminar). He studied at Government College, Hyderabad during 1971-1973 for his HSC. In year 2013, he was elected Member, Executive Committee of GCH Alumni Association (Karachi Chapter). He organized *the First Conference on Anthromathematics* in Government College, Hyderabad last year. On September 4 of the current year, *the Second Conference on Anthromathematics and Sport Mathematics* is to be held in this college. In Fig. 2, the speaker is presenting flower boucher to the Chief Guest, whereas in Fig. 3, the Chief Guest is giving shield to the speaker.
